ENERGON MANAGEMENT PROTOCOL

EMP - A DETERMINISTIC ECOSYSTEM

EMP

STATE-DRIVEN • OBSERVABLE • AUDITABLE • NON-REACTIVE

1. WHAT EMP IS

The Energon Management Protocol is the operational specification for how the Energon system advances, records state, routes protocol activity, and preserves deterministic outcomes.

EMP does not replace the Whitepaper. The Whitepaper defines the foundation; EMP documents the evolving operational architecture built around it.

2. GENESIS FOUNDATION

EON	30,000,000 ERC-20 supply minted once at deployment. No later mint function.
ENERGONCUBE	ERC-721 identity primitive capped at 1,000,000 Cubes.
CONTROLLER	Permissionless ten-minute state progression, distribution/burn logic, and Guardian distribution selection.
IMMUTABILITY	The live EON and EnergonCube contracts are not upgraded by the new Network.

3. GUARDIAN STATES

ONE WALLET - ONE CUBE - ONE GUARDIAN

SILENT
0 Cubes. No Guardian coherence.

COHERENT
Exactly 1 Cube. One wallet. One cube. One Guardian.

FRACTURED
2+ Cubes. Identity condition is broken.

Coherence is derived from Cube balance. It is not randomly assigned. Randomness applies to Guardian distribution selection.

THE ENERGON CLOCK, BURN & MAIN EVAULT

TIME • RESERVES • DETERMINISTIC CLAIMS

1. TEN-MINUTE ENERGON CLOCK

ENERGON BLOCK

10 minutes

Early tick calls return without advancing state. Eligible time steps advance Energon Height.

The ERC-20 supply already exists. Controller-held EON is distributed and burned as protocol state advances.

HALVING Four-year epochs from protocol genesis. The active Controller distribution amount is reduced by half at each halving interval.

2. GENESIS-BOUNDED BURN

→ **25 EON**

Whitepaper burn amount: 25 EON during the genesis-bounded burn period ending December 20, 2029.

Burn law belongs to the existing Energon foundation. The new Network does not rewrite it.

3. MAIN EVAULT

PROTECTED RESERVE

Deterministic EON/USDT0 claim layer

GUARDIAN THRESHOLD	Final production target: 250,000 counted coherent Guardians. Local-test source value 1 must change before deployment.
ACTIVATION	Paid self-sync + 12-hour Guardian activation delay.
CLAIMS	Maximum 2 open claims; 10-minute commit cooldown; 90-day expiry; max claim share 35% of free reserves.
RESERVE LAW	25% liability floor; 1-hour price window; 12-hour payout windows; no hidden off-chain queue.
MATURITY	FREE_24H 0% • FAST_12H 10% • RAPID_6H 20%.

ENERGON NETWORK & EPA NODES

IMMUTABLE PROJECT IDENTITY • PERMANENT NODE HISTORY

1. NETWORK BIRTH PATH

Create EPA — **2,000 WFLR** — **Activate EPA** — **Activate Node**

EnergonNetwork is the immutable authenticity root for Genesis EPAs and permanent Node IDs. It does not become an administrator of EON, Cube, Controller, EVault, or deployed adapters.

2. EPA PAYMENT LAW

90% → PROJECT TREASURY

10% → MAIN EVAULT

WFLR is activation-only. Successful supported payments create permanent EFlow receipts.

3. NODE IDENTITY

Permanent sequential Node ID

Optional public profile can become permanent

No owner / admin / pause / upgrade

4. WHY THIS LAYER EXISTS

The Network lets outside projects become identifiable participants inside Energon without giving them control over Energon.

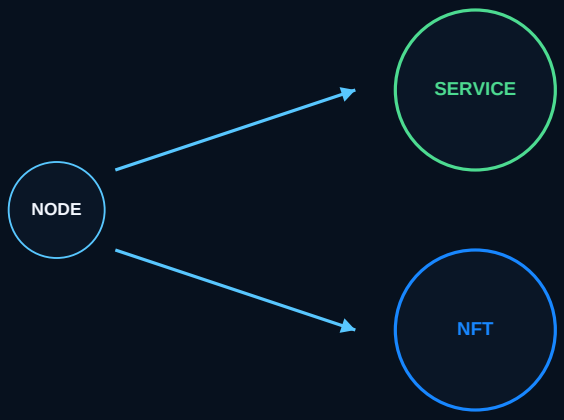

PROJECT → GENESIS EPA → ACTIVE EPA → PERMANENT NODE → LISTINGS / EFLOWS / REPUTATION / ESTABLISHED MARK

The adapter is a payment processor. The Node is the permanent identity. The Registry is the public record.

NODE REGISTRY & LISTINGS

PUBLIC STATE • FROZEN TERMS • NARROW ROUTING

1. NODE LISTINGS

SERVICE

Duration must be exactly 1, 3, 7, 14, or 30 days.

Routes to Service Resolution.

NFT

Duration is always 0.

Routes to NFT Delivery.

Up to 20 sequential Listings per Node. Listing updates are staged. Requests freeze the accepted Listing version and terms.

2. REQUEST SNAPSHOT

Node	1
Listing	1
Type	SERVICE
Version	3
Duration	7 DAYS

FROZEN REQUEST TERMS

Provider / requester

Reference amount

Service duration or exact NFT identity

Cannot silently follow a later Listing edit

3. SEPARATION OF DUTIES

REGISTRY	records public truth and request history
EPA	processes supported project payments and EFlows
SERVICE RESOLUTION	holds bilateral SERVICE token custody
NFT DELIVERY	holds the exact ERC-721 for delivery or return

SERVICE RESOLUTION

BILATERAL CUSTODY • COMPLETION CLAIM • DETERMINISTIC OUTCOMES

1. NORMAL SERVICE PATH

Provider backs 100% -> requester commits matching amount -> fixed SERVICE duration begins -> provider submits completion claim -> requester releases to accept.

Successful release: provider receives its backing + 90% of requester commitment. 10% of requester commitment goes to Main EVault.

2. MUTUAL CANCELLATION

Both parties must approve.

Each receives 97.5%.

2.5% from each → EVault.

3. PROVIDER DEFAULT

No completion claim before ACTIVE deadline.

Requester commitment returned.

Provider backing → EVault.

4. FALLBACK - NO WINNER

Provider claimed completion, but requester did not release before the 7-day window expired.

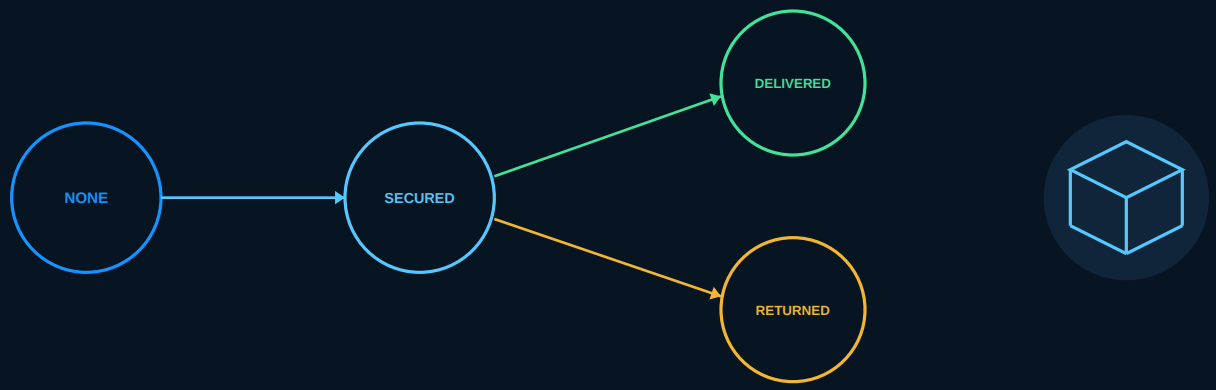

Both locked amounts → Main EVault. The contract does not pretend to determine who was truthful about off-chain performance.

NFT DELIVERY

EXACT ERC-721 CUSTODY • SECURE FIRST • ATOMIC DELIVERY

1. NFT STATE MACHINE

The exact NFT is secured before the commitment path completes. Delivery sends that exact ERC-721 to the buyer; expiry returns that exact ERC-721 to the seller.

2. SELLER CONTRIBUTION

Exactly 0.05 WFLR

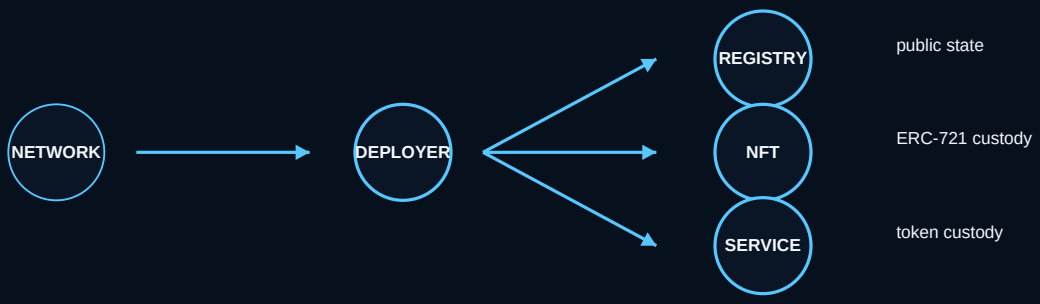

Seller contribution → Main EVault.

No arbitrary fee substitution.

3. IDENTITY CANNOT CHANGE

Node	frozen
Listing	frozen
Buyer	frozen
NFT contract	exact
Token ID	exact

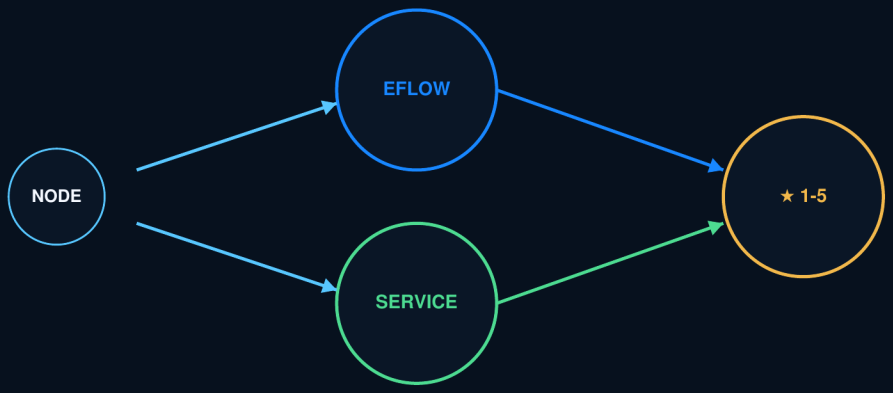

4. NFT SYSTEM BIRTH

VERIFIED REPUTATION & ESTABLISHED MARK

PROVENANCE • AGE • PERMANENT NODE HISTORY

1. VERIFIED NODE REPUTATION

ONE NODE

shared aggregate

separate provenance

EPA ratings remain tied to real EFlow receipts. SERVICE ratings remain tied to released SERVICE requests. Both may contribute to the same Node aggregate without pretending they came from the same execution path.

2. ESTABLISHED MARK - AFTER 365 DAYS

5 USDT0

or deterministic

EON equivalent

One permanent Mark per eligible Node. 100% of the Mark payment is contributed to Main EVault.

3. MARK SUPPLY

CROWN	ROOTED	SIGNUM	LINKED	LEGACY
1,000	5,000	10,000	25,000	UNLIMITED

MAIN EVAULT - COMMON ECONOMIC SINK

DETERMINISTIC CONTRIBUTIONS WITHOUT ADMINISTRATIVE CONTROL

1. CONTRIBUTION PATHS

EPA PAYMENT	10%	**FALLBACK**	both SERVICE amounts
SERVICE RELEASE	10% requester commitment	**NFT DELIVERY**	0.05 WFLR
MUTUAL CANCEL	2.5% + 2.5%	**ESTABLISHED MARK**	100% mark payment
PROVIDER DEFAULT	provider backing		

2. WHAT THIS DOES - AND DOES NOT DO

DOES

Creates deterministic reserve inflows from defined protocol actions.

Lets multiple Network components share a common economic destination.

DOES NOT

Give those components administrative authority over Main EVault.

Create a hidden scheduler, discretionary treasury, or off-chain execution engine.

3. ARCHITECTURAL CENTER OF GRAVITY

EON / CUBE / CONTROLLER	→	**FOUNDATION**
NETWORK / EPA / REGISTRY	→	**ACTIVITY & IDENTITY**
SERVICE / NFT / MARKS	→	**DEFINED CONTRIBUTIONS → MAIN EVAULT**

WHAT THE EMP IS NOW

FROM THE ORIGINAL EMP CORE TO THE EXPANDED NETWORK

1. ORIGINAL EMP CORE

EnergonCube	Guardian states
10-minute cycle	Genesis burn
Halving	Observation

2. EXPANDED EMP

Main EVault	Energon Network
EPA Nodes	Listings
SERVICE	NFT Delivery
Verified Ratings	Established Marks

The original foundation remains.

The operational surface becomes larger.

Authority remains narrow and explicit.

3. DOCUMENTATION CORRECTIONS

EON	Supply is minted once. Operational distribution/burn uses already-held EON.
CUBE	The Cube does not hold a wallet private key.
COHERENCE	Exactly one Cube determines coherence; it is not randomly assigned.
SERVICE	Provider submits a completion claim; requester release is acceptance.
FALLBACK	After an unaccepted completion claim expires, both committed amounts are forfeited to EVault.

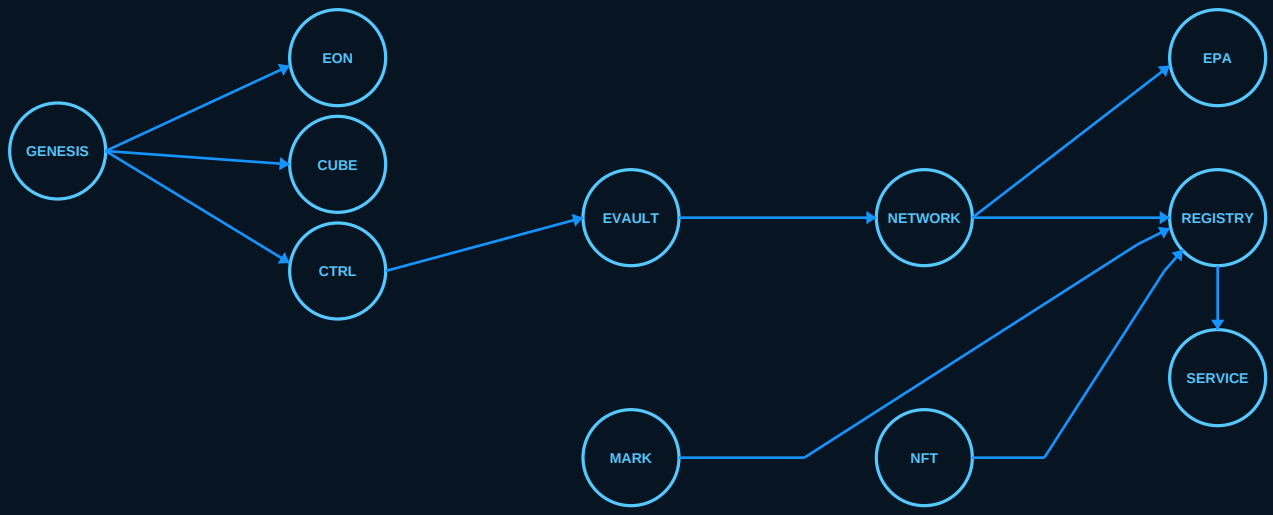

4. DOCUMENT HIERARCHY

WHITEPAPER	Foundational philosophy and genesis rules.
EMP	Operational specification updated as verified system features are added.
SOLIDITY	Source of truth for actual deployed behavior.

SYSTEM BLUEPRINT & PRE-DEPLOYMENT LOCK

THE COMPLETE ENERGON ARCHITECTURE

1. SYSTEM BLUEPRINT

Foundation contracts remain distinct from the expanded Network. Registry routes public state; specialized custody contracts execute SERVICE and NFT paths; Main EVault receives only the deterministic contributions defined by each subsystem.

2. FINAL GATES BEFORE MAINNET

1. Change EVault Guardian threshold from local-test 1 to final 250,000.
2. Complete genuine Provider Default test using reserved Request #5.
3. Complete Fallback walkthrough.
4. Complete final NFT walkthrough.
5. Run full regression; freeze production hashes and deployment manifest.
6. Only then publish the final EMP with mainnet addresses, blocks, timestamps, versions, and protocol IDs.

3. PROTOCOL INTEGRITY

TRUTH BEFORE MYSTERY • LAW BEFORE NARRATIVE • OBSERVATION OVER HYPE

ENERGON DOES NOT ADAPT. IT DOES NOT OPTIMIZE. IT PERSISTS.
